-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 12 November 2003.
- 2a) This action is FINAL. 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1-17 is/are pending in the application.
 - 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) Claim(s) _____ is/are allowed.
- 6) Claim(s) 1-4,7,9,13,14 and 16 is/are rejected.
- 7) Claim(s) 5,6,8,10-12,15 and 17 is/are objected to.
- 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. §§ 119 and 120

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 - a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.
- 13) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application) since a specific reference was included in the first sentence of the specification or in an Application Data Sheet. 37 CFR 1.78.
 - a) The translation of the foreign language provisional application has been received.
- 14) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121 since a specific reference was included in the first sentence of the specification or in an Application Data Sheet. 37 CFR 1.78.

DETAILED ACTION

Response to Amendment

1. Applicants' amendment filed November 12, 2003, has been entered and made of record.
2. Objection to Claims 2 and 4-12 has been withdrawn in view of Applicants' amendment.
3. 35 U.S.C. 112, second paragraph of Claims 4-12 has been withdrawn in view of Applicants' amendment.

Applicants' arguments have been fully considered but they are not persuasive. Applicants argue in essence that prior art of record (Lei et al) does not pre-process an acquired image to obtain a first filtered image and a second filtered image using different filters. The Examiner disagrees and indicates that Lei et al invention pre-process the symbol matrix image by both binarizing the image and performing different filtering methods such as Sobel or Gradient filters to obtain first filtered image and second filtered image (Column 6, Lines 3-19).

Concerning Applicants argument that Lei determines a valid symbol in an image, which is already decoded, it is submitted that the steps recited in Claim 1 are related to evaluation of 2D symbol matrix. There are no decoding steps in the claimed invention, i.e., to read and interpret the content of the coded information analogous to the conventional decoding process disclosed in the prior arts submitted after the First Office Action (e.g., U.S. Patent 5,889,270). In the absence of any explicit recitation of a decoding step, Lei et al invention meet claimed invention.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

5. Claims 1-4, 7, 9, 13, 14 and 16 are rejected under 35 U.S.C. 102(e) as being anticipated by Lei et al (U.S. 6,244,764).

Regarding Claim 1, Lei et al disclose a method of decoding a two-dimensional symbol matrix comprising the steps of:

acquiring an image of an object (Figures 1a and 1b; Column 1, Lines 53-57);
pre-processing said image to obtain a first filtered image and a second filtered image, wherein said first and second filtered images are obtained using different filters (Figure 9; Column 6, Lines 3-19); and

evaluating each of said first and second filtered images for a valid symbol, wherein said second filtered image is not evaluated unless said first filtered image fails to result in a successful evaluation (Figure 9; Column 6, Lines 28-66).

Regarding Claim 2, Lei et al further disclose the method of Claim 1 in which said pre-processing further comprises the steps of:

performing morphology on said image to obtain said first filtered image and said second filtered image comprises said image without said morphology (Column 6, Lines 42-50).

Regarding Claim 3, Lei et al further disclose the method of Claim 1 in which said pre-processing further includes smoothing and sub-sampling of said image (Column 6, Lines 30-34).

Regarding Claim 4, Lei et al further disclose the method of Claim 1 in which said step of evaluating each of said first and second filtered image further comprises the steps of

defining one of said first and second filtered image as a current image (Column 6, Lines 42-56);

locating at least one coarse location within said current image that appear to contain a symbol shape to determine a set of symbol candidate locations (Figures 3-8; Column 6, Lines 45-56);

refining at least one of said symbol candidate locations to obtain a refined symbol image (Figures 3-9; Column 3, Lines 56-67, Column 4, Lines 1-55; Column 6, Lines 28-66);

evaluating said refined symbol image to determine if it corresponds to a valid symbol (Figures 3-9; Column 3, Lines 56-67, Column 4, Lines 1-55; Column 6, Lines 28-66); and

if said symbol image fails to correspond to a valid symbol, then repeating said

Art Unit: 2623

steps of locating, refining and evaluating after having redefined said current image to contain said second filtered image (Column 5, Lines 51-67, Column 6, Lines 1-66).

Regarding Claim 7, Lei et al further disclose the method of Claim 4 in which said step of refining said at least one of said symbol candidate locations further comprises the steps of:

performing a variance-based analysis of each of said at least one symbol candidate locations (Figures 3-9; Column 3, Lines 56-67, Column 4, Lines 1-5); and reducing said set of symbol candidate locations according to whether a variance calculation for a candidate location exceeds a predetermined threshold (Figures 3-9; Column 3, Lines 56-67, Column 4, Lines 1-5; Column 5, Lines 51-67, Column 6, Lines 1-66).

Regarding Claim 9, Lei et al further disclose the method of Claim 4 in which said step of evaluating said refined symbol candidate further comprises the steps of:

performing a generic refinement on said refined symbol to obtain a refined location of a plurality of locator patterns of said symbol candidate (Figures 3-9; Column 4, Lines 7-55);

then performing a symbology-specific refinement (Figures 3-9; Column 4, Lines 41-67, Column 5, Lines 1-50); and

then decoding the result of said symbology-specific refinement (Figures 3-9; Column 5, Lines 1-67, Column 6, Lines 1-66).

With regards to Claim 13, arguments analogous to those presented for Claims 1-4 and 9 are applicable to Claim 13.

With regards to Claim 14, arguments analogous to those presented for Claim 9 are applicable to Claim 14.

With regards to Claim 16, arguments analogous to those presented for Claim 1 are applicable to Claim 16.

Allowable Subject Matter

6. Claims 5, 6, 8, 10-12, 15 and 17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim 5 of the instant invention recites the method of Claim 4 in which said step of locating at least one coarse location further comprises the steps of:

measuring a first and second derivative of image intensity values across said image; and

identifying areas of said image in which said first and second derivatives correspond to areas approximating predetermined shape and size parameters of said two-dimensional symbol;

whereby information for each such identified area comprises a location and an orientation.

Claim 6 depends on Claim 5, and is therefore allowable.

Claim 8 of the instant invention recites the method of Claim 7 in which said variance-based analysis further comprises the steps of:

dividing each symbol candidate location into a plurality of zones;
calculating an intensity variance for each of said zones; and

calculating a variance of a sum of the variances for each of said plurality of zones;

whereby a single variance value is determined for each candidate location.

Claim 10 of the instant invention recites the method of Claim 9 in which said generic refinement further comprises the steps of:

determining a set of two-dimensional areas within said refined symbol candidate, each said two-dimensional area being located and oriented to contain 2D image information corresponding to a locator pattern of a symbol;

evaluating said 2D image information to determine a preliminary refined location where said corresponding locator pattern begins and ends; and

interpolating said preliminary refined locations obtained from two-dimensional areas corresponding to adjacent locator patterns of said symbol to determine a secondary refined location where each said locator pattern of said symbol begins and ends.

Claim 11 of the instant invention recites the method of Claim 9 in which said step of performing a symbology-specific refinement further comprises the step of:

selecting a model symbol from a predetermined set of model symbols;

evaluating said plurality of locator patterns according to said model symbol, to determine which of said locator patterns corresponds to a symbol-specific finder pattern inherent in said model symbol; and

refining said symbol candidate by orienting said symbol candidate according to a predefined location of said finder pattern in said selected model symbol.

Claim 12 depends on Claim 11, and is therefore allowable.

Claim 15 of the instant invention recites the method of Claim 13 in which said step of decoding image information further comprises the step of:

dividing each said coarse location into a plurality of zones;

calculating an intensity variance for each of said zones;

calculating a variance of a sum of the variances for each of said plurality of zones;

whereby a single variance value is determined for each coarse location; and

discarding any coarse location having a single variance value less than a predetermined threshold;

defining a refined location of a symbol candidate by processing each remaining coarse location to determine a set of locator patterns within said coarse location; orienting each refined location according to said set of locator patterns with respect to a selected symbol model defining locator patterns; and interpreting information in a data region of said symbol candidate according to said orientation, and said locator patterns with respect to said selected symbol model.

Claim 17 of the instant invention recites the apparatus of Claim 16 in which said processor further comprises:

a morphology filter for creating said first filtered image;

a coarse location processor for determining a set of coarse locations of symbol candidate information in said image;

a generic filter for removing from said set any coarse locations that fail to meet

predetermined criteria selected from the set of size, location, and orientation; a variance filter for removing from said set any coarse locations having an intensity variance less than a predetermined threshold; a refinement processor for determining the specific location of image information corresponding to predetermined locator patterns according to a model image selected from a set of model images; an orientation processor for identification of a symbol orientation according to said information corresponding to predetermined locator patterns; a symbol decoder for decoding data region information in said image; and a symbol evaluator to determine if said decoded symbol is a valid symbol.

Conclusion

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Contact Information

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mehrdad Dastouri whose telephone number is (703) 305-2438.

The examiner can normally be reached on Monday to Friday from 8:00 a.m. to 4:30 p.m. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Amelia Au can be reached on (703) 308-6604.

The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9314 for regular and for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the T.C. Customer Service Office whose telephone number is (703) 306-0337.
